MINISTER OF THE STATE OF

## **C-DOT, IIT Roorkee** sign pact to develop 140 GHz transmitter

The technology will be in line with development of indigenous 6G ecosystem in the country. The novelty of this system lies in generation, transmission and antenna integration of THz waves onto a single chip; leading to reduced system size, weight and power consumption, hence making it suitable for use in portable devices such as smartphones, laptops, wearables etc

AAT News Service

HE Centre for Development of Telematics (C-DOT), a premier telecom R&D centre of the Department of Telecommunications (DoT) of Telecommunications (DoT) and Indian Institute of Technol-ogy (IIT) Roorkee signed an agreement for 'Developing a 140 GHz fully-integrated trans-mitter and receiver module for 6G and beyond'.

Go and beyond'.

The agreement, signed under the Do's Telecom Technology Development Fund (TTDF) Scheme, has been designed for providing funding support to domestic companies and institutions involved in technology design, development, commercialisation of telecommunication products and solutions to enable

affordable broadband and mo-bile services in rural and remote

bile services in rural and remote areas.

The objective of this agreement is to develop a 140 GHz fully-integrated transmitter and receiver module to enable applications for 6G and beyond. The novelty of this system lies in generation, transmission and antenna integration of THz waves onto a single chip; leading to reduced system size, weight and power consumption, hence making it suitable for use in portable devices such as smartphones, laptops, wearables etc. This chip will support data rates of up to several gigabits per second, enabling high-speed data transfer with a chip or between chips.

"We are fully committed for

contributing to the development of next-generation communication technologies in line with the vision of Viskis Bharai@2047. C-DOT has played an important role for this research collaboration which strengthens objective of promoting cutting-edge research capabilities and infrastructure in the telecom sector," said the representatives of the communication of the co

Speaking at the event, CEO, C-DOT, Rajkumar Upadhyay said, this technology developed on a single chip will lead to considerable reduction in system size, weight and power consumption, hence making it suitable for use in 6G devices. It will pave the way for building homegrown 6G solutions/applications with ultra-low latency. C-DOT Speaking at the event, CEO.

said the representatives of IIT

has played a key role of indigenously designing and developing 6G technologies, thus fulfilling the overarching objective of 'Bharat 6G Mission'.

The successful completion of this project will contribute to the development of next-generation ultra-fast, low-latency 6G networks further contributing to the drastic transformation of various industry sectors. The Universal Service Obligation Fund (USOF), a body under the DoT, launched the TTDF Scheme on October 1, 2022. The scheme aims at funding R&D in rural-specific communication technology applications and form synergies among academia, start-ups, research institutes, and the industry to build and develop the telecom ecosystem. Additionally, the scheme aims at promoting technology ownership and indigenous mains at promoting technology over-innovation, reducing imports, boosting export under the scheme, USOF is also targetting to develop started the scheme, USOF is also targetting to develop stardards to meet countrywide re-

also targetting to develop stan-dards to meet countrywide re-quirements and create the ecosystem for research, design

ecosystem for research, design, prototyping, use cases, pilots, and proof-of-concept testing, among others. The scheme entails grants to Indian entities to encourage and induct indigenous technologies tailor-made to meet domestic needs. IIT Roorkee has made a big move to boost innovation and help India become more self-reliant in technology. The institute is among the foremost of institutes of national importance in higher technological education and in engineering, basic and applied research. Since its establishment, the institute has played a vital role in providing the technical manpower and the technical manpo

the technical manpower and know-how to the country and in pursuit of research.

The institute ranks amongst the best technological institu-tions in the world and has com-tributed to all sectors of techno-logical development. It has also been considered a trend-section to the section of the con-search in the field of science, technology, and engineering.
